More and more farming and ranching is becoming a game of numbers. By that, I mean statistical data is becoming more important than ever for planning - effecting supply and demand factors in agriculture, the interrelationship between production of crops and certain animals, and having an impact on a wide range of related agri-businesses.

While much of this information is provided at more frequent intervals during the year, we hope that the following Oklahoma Agricultural Statistics 1981 booklet will provide readers with a broad prospective of the state's agricultural industry and be of service to all users of agricultural statistics.

We are all indebted to the farmers and ranchers who voluntarily supplied information to the Oklahoma Crop and Livestock Reporting Service and helped insure its accuracy.

Sincerely,

Jack D. Craig

Jack D. Craig

AGRICULTURAL STATISTICS DIVISION
P.O. BOX 1095
OKLAHOMA CITY OKLAHOMA 73101

JOHN E. COCHRANE
STATE STATISTICIAN

JACK D. CRAIG
COMMISSIONER

Presented on the following pages of this report are measures of Oklahoma's agricultural production. These agricultural statistics are based on survey responses from farmers and ranchers. We wish to express our appreciation to all of the crop and livestock reporters and agri-businessmen who voluntarily participated in the sample surveys.

The office staff who prepared these agricultural statistics are John Waldrop, Assistant State Statistician, with Agricultural Statisticians Burton Bartlett, Daryl Brinkman, James Heep, Riley Henderson, Monnie Miller, Dave Ranek, and Jennifer Tamm. The program support group includes Sharon Adams, Carol Coon, Candace Darner, Charlotte Gamble, Laura Jones, Judy King, Teresa Melton, Nancy Parsons, Alberta Penix, Saroja Rathakrishnan, Donald Rushing, Kathy Sherfield, and Ila Mae Spiva.

This publication was assembled under the guidance of Burton Bartlett and assisted by Donald Rushing.

Current reports and forecasts may be obtained by writing the Commissioner of Agriculture or the State Statistician.

Sincerely,

John Cochrane

John E. Cochrane
State Statistician

## OKLAHOMA CROP AND LIVESTOCK REPORTING SERVICE

## SAMPLING METHODS AND ESTIMATION

The data collection program of the Crop and Livestock Reporting Service consists of a series of surveys designed to produce current agricultural statistics of acreages, yield and production of crops, livestock and poultry inventories, and other information pertaining to Oklahoma's agricultural economy.

The most important source of survey data is the farm operator who voluntarily supplies information about his farming operations. Most surveys include a fairly large sample of operators which are surveyed by mail. Some producers may be in a smaller preselected probability sample in which responses are collected by personal interview or by telephone.

Data are also collected from agribusiness firms and merchants serving agriculture. Both suppliers of agricultural inputs and purchasers of raw farm outputs are important sources for developing statistics on agricultural commodities. In addition, these firms can also provide valuable data on quantities marketed or processed, which are used as check data to revise earlier estimates made from sample surveys. Data from these sources are especially useful in the nonprobability mail surveys.

Survey methods have changed significantly during the past two decades and many different sampling and surveying techniques are used currently. Lists of farm operators, including names and addresses, are used for many of the surveys and are well suited for the collection of information by mail. The low cost of data collection from a list sample is one of the principal advantages of this method. Another advantage is the ease with which supplementary information can be included and used to classify operations as to type and size. This allows the use of efficient stratified sample designs.

Today, many probability surveys, using personal interviews and actual field counts to collect data, supplement the mail approach. Enumerative surveys require the collection of survey data pertaining to specific land areas (segments). In Oklahoma, a sample of 360 segments which average approximately one square mile in size are enumerated each year. The information collected is used to supplement mail surveys to provide indications on crop acreages and livestock numbers. Objective counts and measurements are taken each month throughout the growing season from 200 randomly selected wheat yield plots. This information is used to supplement indications of wheat yield provided by the mail responses from monthly crop reporters. The enumerative and objective yield field activities are conducted by approximately 40 part-time enumerators whose work helps provide information for preparing more reliable statistics.

Beginning in 1981, Oklahoma has been participating in a research project called AGRISTARS. This project is designed to determine if satellite information can be used to improve the precision of crop estimates at the state, crop reporting district and county levels. Another goal is to develop methods which will give early warning to the agriculture industry of changes in crop conditions that may affect production. The project is a cooperative effort of the U. S. Departments of Agriculture, Commerce and Interior, NASA, and the Agency for International Development.

John Waldrop,
Assistant State Statistician

U.S. CENSUS OF AGRICULTURE - OKLAHOMA FARM DATA IN BRIEF

| Oats | 1897 | Bu. | High | 1921 | 1,705 | 1979 | 48.0 | 1920 | 45,780 |
| | | | Low | 1979 | 95 | 1911 | 10.0 | 1975 | 3,230 |
| Barley | 1899 | Bu. | High | 1961 | 757 | 1979 | 46.0 | 1970 | 23,400 |
| | | | Low | 1909 | 10 | 1911 | 5.0 | 1913 | 119 |

## LIVESTOCK RECORDS, OKLAHOMA, 1891-1981

| Species | Date Series Began | Record | Year 1/ | January 1 Inventory (000) |
|---|---|---|---|---|
| All Cattle and Calves | 1891 | High | 1975 | 6,500 |
| | | Low | 1891 | 787 |
| Milk Cows | 1891 | High | 1944 | 912 |
| | | Low | 1891 | 30 |
| All Hogs and Pigs 3/ | 1891 | High | 1911 | 1,600 |
| | | Low | 1891 | 26 |
| All Sheep and Lambs | 1924 | High | 1942 | 399 |
| | | Low | 1924 | 63 |
| All Chickens 3/ | 1924 | High | 1944 | 16,247 |
| | | Low | 1974 | 2,800 |

1/ Latest years that records were achieved. Some records were equaled in earlier years.

2/ Production is measured in bales. Beginning in 1971, 480 pound bales; prior years, 500 pound bales.

3/ Changed from January 1 to December 1 inventory -- Hogs in 1967, Chickens in 1969.

# OKLAHOMA CROP—WEATHER SUMMARY

Crop Reporting Board
Oklahoma Crop and Livestock Reporting Service

1981 CROP AND WEATHER REVIEW

January: Normal to slightly below normal temperatures were the rule during the first half of the month with normal to above normal temperatures the last half. Precipitation was generally light. By February 1, wheat and other small grains were in fair to poor condition due to insufficient moisture even though temperatures were favorable. The shortage of soil moisture limited root development which increased plant susceptibility to wind damage.

February: The month started off cool with slightly below normal to moderately below normal temperatures prevailing throughout the first half of the month. A warming trend took place about mid-month and temperatures averaged above normal for the remainder of the month. Precipitation, although heavier than in January, was still far short of what was needed. As the month ended, wheat was in generally fair condition across most of the State except in the western one-fourth of the State where the condition was poor. Some land was being tilled to help control soil blowing.

March: Normal to above normal temperatures continued throughout March with much needed precipitation occuring in each district every week. Wheat and other small grains improved dramatically throughout March and made excellent growth. By month's end all small grain crops were rated in good condition. The improved surface moisture supplies were beneficial for row crop ground preparation.

April: Statewide, above normal April temperatures were favorable for growth and development of wheat and other small grains. Although dryer than normal, scattered rains throughout the month were sufficient in most crop districts to limit the effects from drought conditions that had been experienced since June 22, 1980. Development of wheat and other small grains was running a week to ten days ahead of normal.

May: Crop conditions generally improved during May as temperatures were below normal and much needed precipitation was received in most localities. As of June 1, wheat harvest was getting underway in all districts except the Panhandle and five percent of the State's acreage had been cut compared to less than 1 percent for the previous year and average. Planting of row crops made excellent progress during the month and by the month's end sorghum was 60 percent planted, soybeans were 30 percent, peanuts 60 percent and cotton 45 percent.

June: Temperatures averaged near normal most of June, however, there was a warming trend during mid-June. Scattered rains were received Statewide throughout the month, but precipitation was lighter at mid-month. The dryest areas of the State were the Panhandle and Northwest Counties. Wheat and other small grains were ripe in all districts except the Panhandle by June 8th. Harvest was delayed, however, by rainy weather in early June, but for the most part was complete by July 1st. Considerable acreage of wheat and other small grains was lost as result of the winter drought and locally heavy spring rains which caused flooding. Row crops on July 1st were in generally fair to good condition across the State. Some moisture stress was apparent in areas of the Panhandle. By the end of the month, additional moisture was needed Statewide for row crops.

July: Hot dry weather prevailed throughout most of July, with row crops beginning to show signs of heat and drought stress. Cooler temperatures and scattered rains in late July provided some relief. As a result, crop conditions and prospects improved. On August 1st, top soil moisture supplies were adequate in 90 percent of the counties, and subsoil moisture supplies were adequate in 45 percent of the counties. However, additional moisture was needed to insure a good fall harvest.

August: August weather was characterized by scattered rains and cooler temperatures. By September 1st top soil moisture was adequate in 80 percent of the counties and subsoil moisture supplies were adequate in 70 percent of the counties. Fall crop conditions improved throughout the month and by the end of the month all row crops were rated in good condition. However, dryland grain sorghum and cotton were showing definite signs of moisture stress and worms were becoming a major problem in soybean fields in the Southeast District.

September: September was characterized by open dry weather. By the first of October top soil moisture was adequate in the Panhandle, West Central, North Central, and South Central crop reporting districts, but was short to adequate elsewhere. Crop growing conditions were favorable during the month for all row crops, and harvesting got underway.

October: Weekly precipitation in Oklahoma after October 12 was received in all crop reporting districts. Heavy rainfall and some flash flooding occured in the South Central District. Accumulated amounts received during the month were well above normal in all crop reporting districts except the Panhandle and Southwest. As of November 1, temperatures ranged from 2½ degrees above normal in the Northwest to near 2 degrees below in the South. Sunshine and drying temperatures were needed by the end of the month to aid maturity and harvest of fall crops.

November: Temperatures were generally normal throughout the month with light precipitation occuring across the State. As of December 1, Oklahoma's 1982 wheat crop was rated in good or better condition with 100 percent of the crop planted, 95 percent up to stand and 5 percent being grazed. Sorghum and soybeans were in good condition while peanuts and cotton were only in good to fair condition. Harvest continued to pick up momentum throughout the month and by the end of the month sorghum was 95 percent complete, soybeans 65 percent, peanuts 85 percent and cotton 25 percent.

December: Adequate moisture and mild temperatures were the general rule during December and as the month ended, top soil and subsoil moisture supplies were adequate to surplus in 90 percent of the reporting counties.

# OKLAHOMA CROP PRODUCTION

Crop Reporting Board
Oklahoma Crop and Livestock Reporting Service

## 1981 CROP PRODUCTION

Crop production in 1981 rebounded sharply in most areas of the State from the drought reduced levels of 1980. A combination of timely rains and favorable spring and summer temperatures provided almost ideal growing conditions. Yield prospects were very promising up until the final stages of crop development. As harvest approached, problems occurred which reduced yields to only average levels for most crops.

In late May, hail and high winds struck the major wheat production regions and reduced yields and acres harvested substantially. Row crops were also damaged near harvest time as unseasonably cool, damp late fall weather inhibited final development. A high percentage of the row crop acreage managed to be harvested but with disappointing yields.

Wheat production for 1981 totaled 173 million bushels, down 11 percent from 1980 but still the fourth highest production in history. Yield, at 27 bushels per acre, was 3 bushels below 1980. Acreage harvested for grain totaled 6.4 million acres out of 7.9 million acres planted.

Production of sorghum grain totaled 22 million bushels, up 35 percent from the reduced levels of 1980. Yield, at 42 bushels per acre, was 8 bushels better than 1980.

Fewer acres were planted to peanuts in 1981. Plantings were cut back to 95,000 acres compared to the 123,000 acres planted in each of the previous four years. This was attributed mainly to the price of seed, depleted supplies of irrigation water and general economic conditions. Ninety-one thousand acres were harvested with an average yield of 2,080 pounds per acre. This resulted in a production of 189 million pounds.

Cotton and soybean production at 440,000 bales and 6.5 million bushels respectively, were more than double the previous year's production. Fewer acres were planted than a year earlier but more acres were harvested and yields were much better.

The pecan and peach crops were among the best in history. The State's pecan crop, at 47 million pounds, was the second best in history next to the 53 million pounds produced in 1967. The peach crop at 13 million pounds was the best since 1953.

Hay stocks were rebuilt because of a good year for production and a smaller demand for hay. Hay production totaled 3.3 million tons.

Crop Reporting Board
Oklahoma Crop and Livestock Reporting Service

## TOTAL MEAT ANIMAL PRODUCTION AND VALUE DECLINES

Oklahoma's cattle and calf inventory on January 1, 1982,increased as the U.S. cattle cycle progressed through its 3rd year of the building phase. Annual average prices received in 1981 for all livestock categories except hogs were down from a year earlier. Compared to 1980, cash receipts for cattle and sheep decreased; but hog and pig income was up. Total value of production and gross income from all livestock declined substantially from a year earlier.

Cattle and calves on Oklahoma farms and ranches totaled 5,800,000 head on January 1, 1982, up 7 percent from the previous year. The State's cow inventory totaled 2,450,000 head and was composed of 2,340,000 beef cows and 110,000 milk cows. Beef cow inventory increased 2 percent while milk cows declined by 2 percent from a year earlier. The number of steers and heifers over 500 pounds and calves under 500 pounds was up from January 1, 1981,as the result of better pasture and range conditions during the year. The average inventory value of $320 per head gave a total dollar value for all cattle and calves on the State's 66,000 operations with cattle of $1.9 billion, 11 percent below the value a year earlier.

The number of cattle and calves in Oklahoma feedlots on January 1, 1982, was 17 percent below the previous year and 25 percent below the all time high number on January 1, 1978. Fed Cattle Marketing during 1981 were 3 percent below a year earlier and 24 percent below the record number marketed in 1978. Cattle and calves placed on feed during the year were down 13 percent from 1980.

Hog numbers declined throughout 1981 and as of December 1, totaled 245,000 head on the State's 9,000 hog operations. Total hog inventory was down 30 percent, breeding stock was down 24 percent and the number of market hogs was down 31 percent from December 1, 1980. The 1981 pig crop was 24 percent smaller than a year earlier and included 240,000 spring pigs and 175,000 fall pigs. Average value per head of $63.00 resulted in a total inventory value of $15.4 million.

Sheep and lamb inventory continued to increase and marked the sixth consecutive year of expansion. Sheep and lambs on Oklahoma's 2300 sheep farms on January 1, 1982, increased 11 percent from a year earlier and included 90,000 stock sheep and 15,000 sheep and lambs on feed. The 1981 lamb crop of 71,000 head was 15 percent above the previous year. Wool produced during 1981 totaled 721,000 pounds, 7 percent more than the previous year production. The average value per head of $64.00 which was $5.00 below 1981 still resulted in a 3 percent increase in total inventory value for all sheep and lambs.

## 1981 DAIRY REVIEW

Oklahoma's January 1, 1982 milk cow population totaled 110,000 head, a decrease of 2 percent from the previous year. Heifers being kept for milk cow replacement totaled 35,000 head, a decrease of 12 percent from January 1, 1981.

Milk production of 1,150 million pounds in 1981 was 4 percent above the previous year and the highest output since 1977. Production per cow in 1981 reached a record 10,455 pounds, a 5 percent increase from the previous high achieved a year earlier, but 1,692 pounds below the national average per cow.

A 6 percent increase in average return per hundredweight for milk and cream pushed total cash sales to a record $163.7 million, compared with the previous high of $148.6 million in 1980. Producer returns from combined marketings of milk and cream averaged $14.61 per hundredweight, 74 cents above the national average.

Total milk and cream marketings of 1,121 million pounds in 1981 increased 4 percent from the previous year. Of the total milk produced during 1981, approximately 97 percent was marketed. Nationally, 98 percent of the total milk produced was sold through milk handling channels. An estimated 29 million pounds of milk were used on Oklahoma farms, a decrease of 6 percent from 1980.

The quantity of whole milk (net whole milk equivalent) utilized in manufacturing dairy products totaled 452.0 million pounds in 1981, compared with 353.1 million pounds the previous year.

Production of creamed cottage cheese, at 10.0 million pounds, increased 2 percent from the previous year. Cottage cheese curd decreased while lowfat cottage cheese increased from a year earlier.

Total production of frozen dairy products increased 4 percent from 1980 to 15.0 million gallons. Ice cream production reached a record 9.7 million gallons, up 1 percent from 1980. The output of ice milk increased 12 percent but milk sherbet decreased 8 percent. Mellorine production decreased 15 percent to the lowest level since records began in 1952.

Crop Reporting Board
Oklahoma Crop and Livestock Reporting Service

## POULTRY REVIEW - 1981

The number of chickens, excluding broilers, on Oklahoma farms and ranches on December 1, 1981, totaled 4,200,000 birds, up 11 percent from a year earlier. The increase in inventory was aided by the moderate climate year-round which resulted in the lowest death loss since records began in 1924. The average value of non-broiler chickens on December 1, 1981 was $2.30 per bird, yielding a total inventory value of $9,660,000.

The annual average number of hens and pullets of laying age was 3,542,000, the largest average since 1959. Hens and pullets of laying age averaged 237 eggs per bird during 1981.

Egg production during 1981 totaled 839 million eggs, equaling last year's record high. Of the total number of eggs produced, 98 percent were marketed at an average price of 72.5 cents per dozen, providing $49,844,000 in cash receipts. Home consumption of eggs was valued at $846,000, bringing the gross value of egg production to $50,690,000 for 1981.

A total of 50,866,000 commercial broilers were produced by Oklahoma farmers, up 13 percent from 1980.

Commercial hatcheries in Oklahoma hatched 1,348,000 egg-type chicks during 1981, a 14 percent increase from the 1980 hatch.

There were 1,900,000 farm chickens (mostly old hens) sold during the year which averaged 17.5 cents per pound, resulting in sales of $1,496,000, down 5 percent from 1980. Home consumption of farm chickens was valued at $56,000, bringing the total value to $1,552,000.

During 1981, a total of 1,605,000 turkeys were raised in Oklahoma, 28 percent fewer than last year's record high. The average liveweight was 19 pounds per bird which accounts for 30,495,000 pounds of total production. The average price received by producers of 37 cents per pound declined 4 cents from the previous year. The decrease in production and lower prices resulted in a 31 percent drop in gross income to $11,283,000.

# OKLAHOMA AGRICULTURAL PRICES

Crop Reporting Board
Oklahoma Crop and Livestock Reporting Service

## PRICES RECEIVED FOR FARM PRODUCTS MIXED

Prices received for farm commodites were mixed in 1981. A few increases helped offset many price declines. As decreed, by law, the conversion to a base year of 1977 (1977 = 100) took place. To keep index values current this updating takes place every ten years.

The Prices Received Index for all crops averaged 149 percent of the 1977 = 100 base. Winter wheat averaged $3.85 for 1981, up 2 cents from 1980's figure. Cottonlint prices plunged from 1980's record 76.6 cents per pound to 41.9 cents, a 45 percent drop. Likewise, cottonseed averaged only $84.50 per ton in 1981, down 32 percent from 1980. Season average prices of other crops, and the changes from 1980 were: grain sorghum, $4.10 per cwt, down $1.36; oats, $2.25, up 29 cents; corn, $3.00, down 55 cents; barley, $2.65, up 19 cents; and rye was unchanged at $2.00. Soybeans joined the losers, down $1.64 to $5.70 for the year. Peanuts were off 1.2 cents to 24.6 cents per pound while pecans fell 29 cents to 45.7 cents per pound. Alfalfa hay prices ranged from $118.00 per ton in January to a low of $73.00 in September and October.

Livestock prices were mixed in 1981 with cattle accounting for most of the decreases. The Index of Livestock and Livestock Products averaged 159 percent of the 1977 = 100 base year. All Beef Cattle dropped for the second consecutive year, down 8 percent to $57.40 per cwt. Steers and heifers provided the bulk of the decrease, down $6.30 per cwt, while cows were off $4.40. Calves under 500 pounds brought $11.90 per cwt less in 1981. Dairy cow replacements cost $40 less per head averaging $1220. Prices received for milk averaged $14.40 per cwt, up 80 cents. Hog prices were also better in 1981, ending up at $42.70 for the year.

Cash receipts from farm marketings totaled $3.2 billion in 1981, a 3 percent decline from 1980. Cash receipts from sales of crops declined $148 million. This decline was partially offset by a 2 percent increase of $44 million in cash receipts of livestock inspite of lower overall livestock prices. Livestock and related products accounted for 66 percent of total farm receipts.

Oklahoma farm real estate values continued to rise in 1981, posting a 10 percent increase. The State average value for farmland and buildings amounted to $662 per acre.

Dave Ranek
Agricultural Statistician

| TOTAL NET FARM INCOME | 2,476 | 523 | 4,279 | 11,036 | 4,989 |

1/ Revised. Details may not add to totals due to rounding

All income derived from farm operations and Government farm programs is included in the above table. The following description of terms may be helpful in interpreting the table:

Cash Receipts from Farm Marketings - Receipts from sales, loans made or guaranteed by CCC and purchases under price support programs.

Government Payments - Those payments made to farmers in connection with programs such as Agricultural Conservation, Feed Grain, Wheat and Cotton, Disaster Payments, etc.

Non-Money Income - Includes the value of farm products consumed directly in farm households and the rental value of housing provided by farm dwellings. Expenses associated with these products and the dwellings are included in the production expense estimates, thus the non-money imputations do not add on a dollar-for-dollar basis to the net.

Realized Gross Farm Income - The sum of the above income sources.

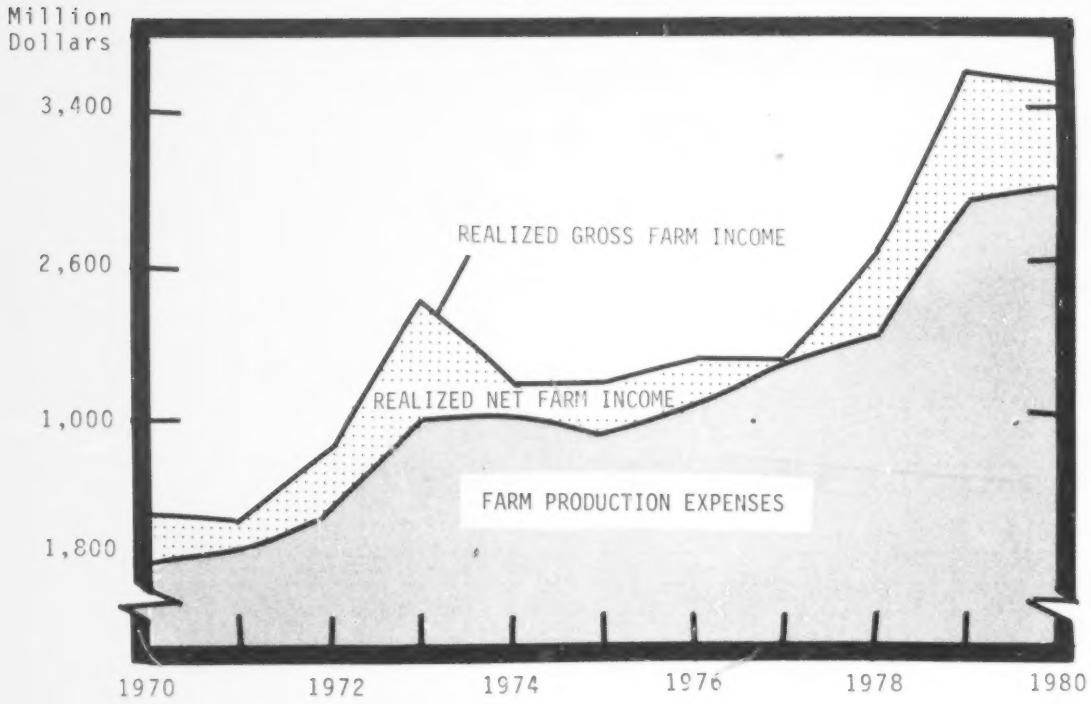
Farm Production Expenses - Cost of current operations including hired labor, repairs, feed, seed, livestock, depreciation on production facilities (excludes new capital equipment, taxes, and rents).

Realized Net Farm Income - Realized gross income minus production expenses.

Net Change in Farm Inventories - Value of change in quantities of crops and livestock products kept on farms from one year to the next (may be a minus value).

Total Net Farm Income - Realized net income plus the net change in inventories.

FARM INCOME, OKLAHOMA, 1970-1981



CASH RECEIPTS, OKLAHOMA, 1970-1981
